STOCK TROUGH RANGE

All UPT stock troughs are made from food grade U.V stabilized polyethylene.

The rounded edge design ensures strength and durability, and there are no sharp edges or external screws to injure livestock.

The float valve is protected by a fully moulded cover, and as all pipe-work enters from beneath the float-valve cover there is less chance of stock damage.

All troughs are fitted with 25mm Hansen Max-Flo® adjustable float valves, with the exception of the 2600 ltr trough which has a 32mm Hansen valve, and the TR 700 (grow-bed) has no valve.

Delivery, Installation and Warranty

Delivery

Urban Poly Tanks delivery vehicles can be up to 19 metres long, 3.5 metres wide and 4.6 metres high. It is the purchaser's responsibility to ensure there is adequate clearance for the delivery vehicle.

In the event there is insufficient access, products will be unloaded at the closest convenient location, as determined by the truck driver.

Urban Poly Tanks will not allow our drivers to lift tanks over fences or buildings or perform deliveries that may cause harm to themselves or other people or property. Please do not ask them to do so.

Installation

All tanks should be sited on a stable flat level base with at least 100 mm gap between the tank and any wall.

The preferred base is a reinforced concrete slab at least 100 mm thick, and 200 mm larger than the diameter of the tank.

A well compacted sand base approximately 100 mm thick is an acceptable alternative, providing the edges of the base are protected from erosion.

The correct tank base is vital to ensure your tank will serve you for many years to come.

A poorly constructed base can cause premature failure of your tank and will void your warranty.

Your tank should be installed by a suitably qualified trades person to the relevant requirements applicable to your area.

If necessary, please confirm these requirements with your local authority.

Warranty:

Urban Poly Tanks Pty Ltd will repair, replace or refund the purchase price (at its discretion), a defective round water tank, provided the defect is a manufacturing defect. This warranty applies for a period of ten (10) years from the original purchase date, and is a pro-rata warranty.

All other water storage products have a 2 year pro-rata warranty.
